

## Welcome to the Invisible Internet

The Invisible Internet is a privacy by design, people-powered network. It is a truly free and anonymizing Internet alternative. [Get I2P.](#)

### What is I2P?

The Invisible Internet Project (I2P) is a fully encrypted private network layer. It protects your activity and location. Every day people use the network to connect with people without worry of being tracked or their data being collected. In some cases people rely on the network when they need to be discrete or are doing sensitive work.

### I2P Cares About Privacy

I2P hides the server from the user and the user from the server. All I2P traffic is internal to the I2P network. Traffic inside I2P does not interact with the Internet directly. It is a layer on top of the Internet. It uses encrypted unidirectional tunnels between you and your peers. No one can see where traffic is coming from, where it is going, or what the contents are. Additionally I2P offers resistance to pattern recognition and blocking by censors. Because the network relies on peers to route traffic, location blocking is also reduced.

### Peer-to-Peer

The network is people powered. Peers make a portion of their resources, particularly bandwidth, available to other network participants. This allows the network to function with relying on centralized servers. [Learn more about the Protocol Stack.](#)

### Privacy and Security By Design

I2P has created transport protocols that resist DPI censorship, and continuously improves its end to end encryption. [Read the I2P Transport Overview.](#)

### Built For Communication

I2P has an application layer with easy to use APIs for creating your own privacy - aware apps.

Mac

Linux

Android

Docker

### Basic Steps for Installation

Once you've got I2P downloaded, getting I2P installed and running will consist of up to three steps

**1** **Download Java**

 I2P needs Java to run for Windows, Mac, and Linux.

[Download Java](#)

**2** **Installation Guide**

Step-by-step installation guides include setting up Java, installing I2P and using the I2P set-up wizard.

[Instructions](#)

**3** **Browser Configuration**

Configure your browser settings to be compatible with the I2P network.

## Installation

- I2P Installation
- Launching I2P
- Wizard Walk-through

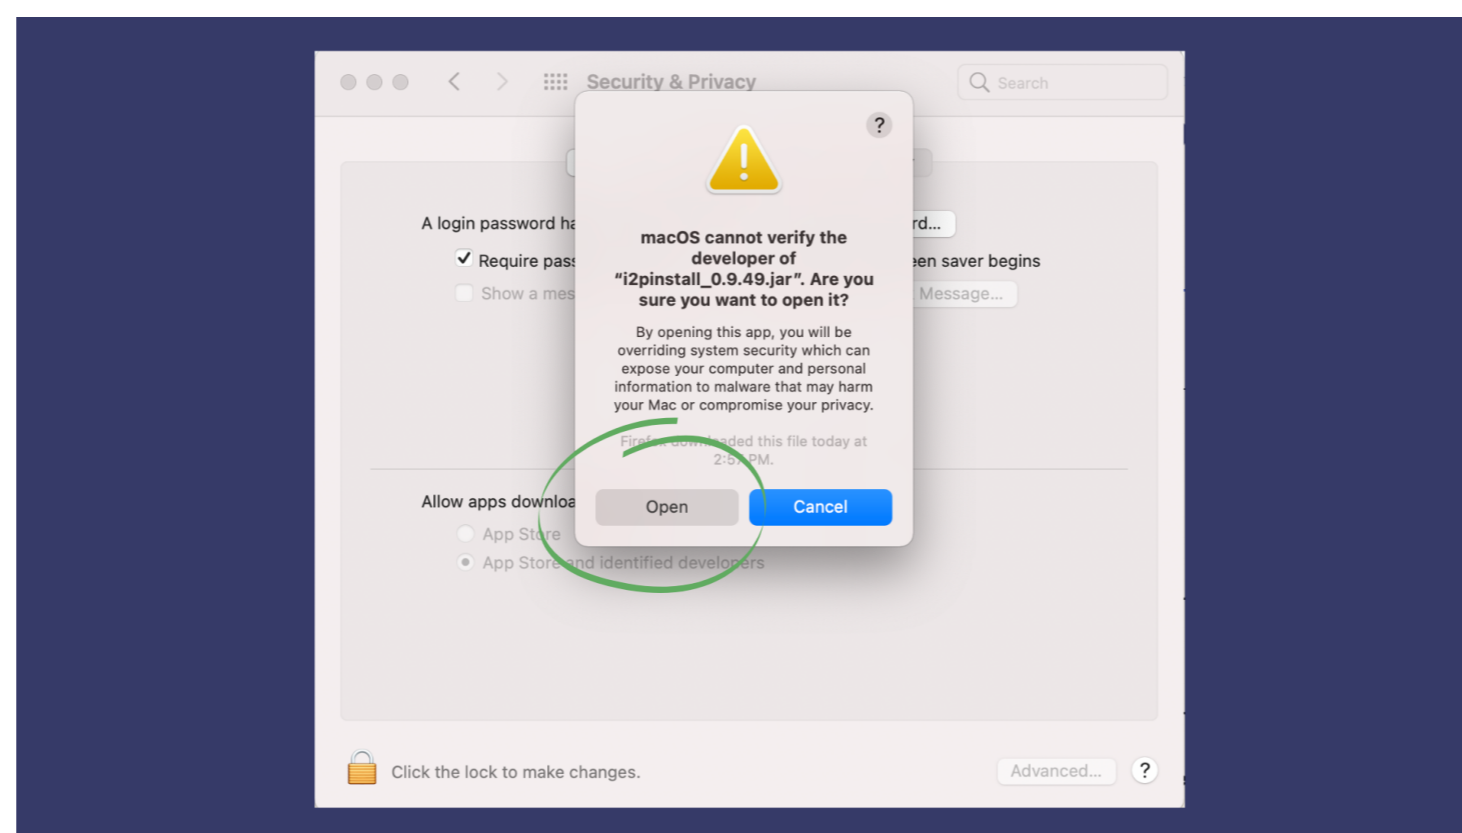

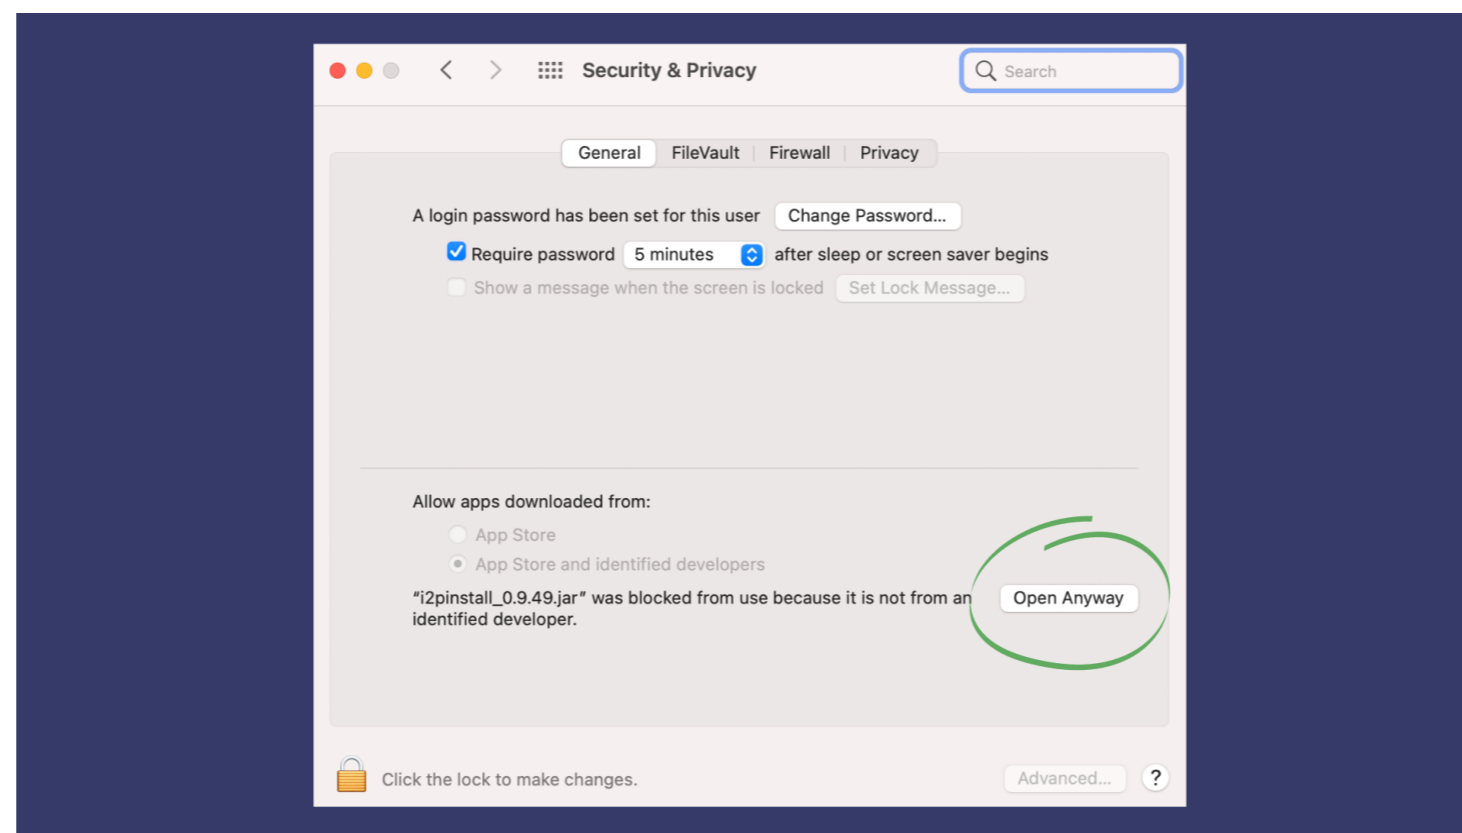

## Installation Instructions for Mac OS

### I2P Installation

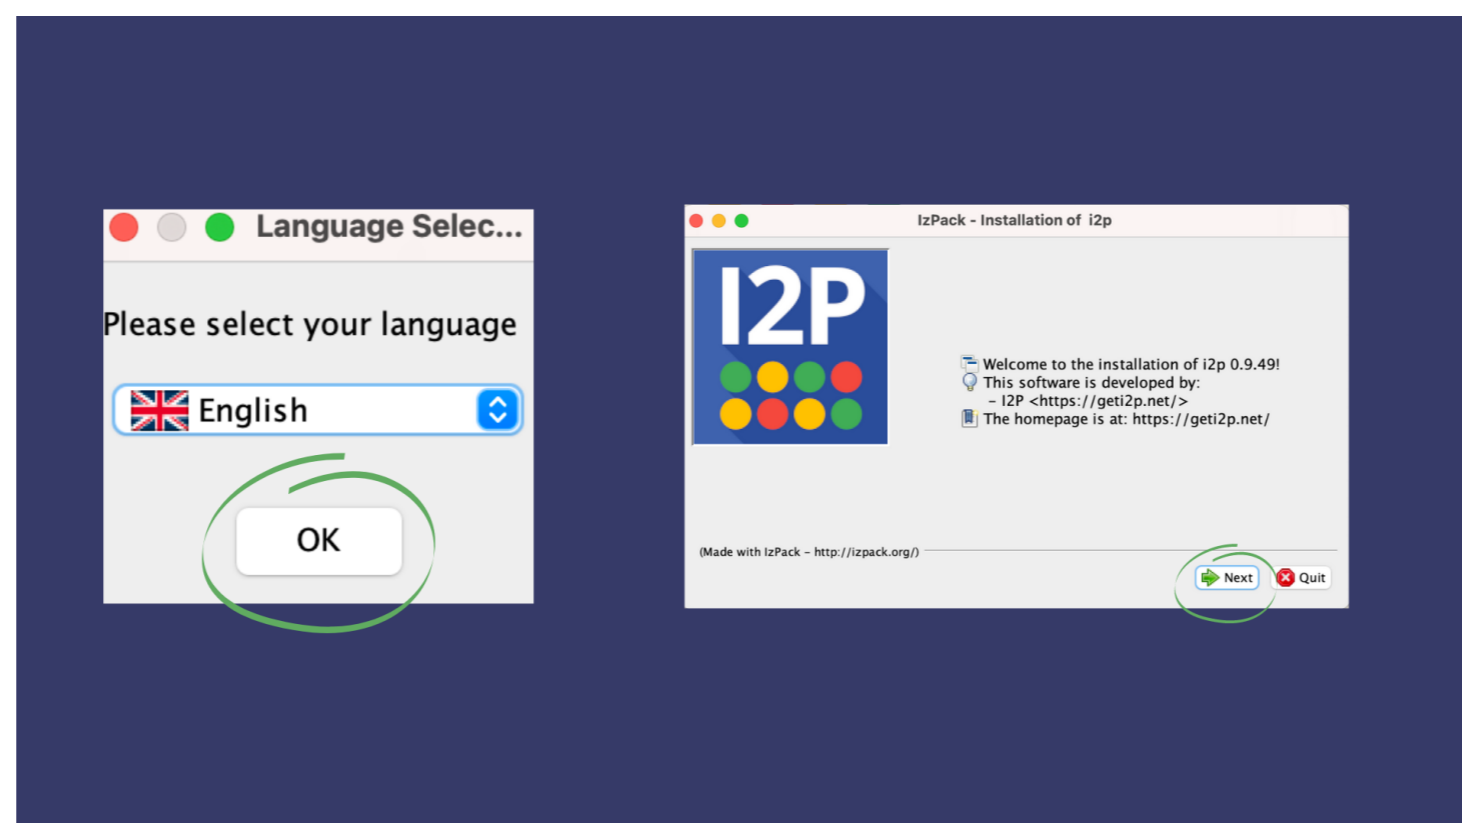

- 1 Download and install [Java](#) if you have not already. Step by step installation instructions for Java can be found [here](#).
- 2 Open the .jar file. Notice the coffee cup icon, which means it can be opened since Java is installed.

- 3 Mac will ask you to allow permissions to open the file.

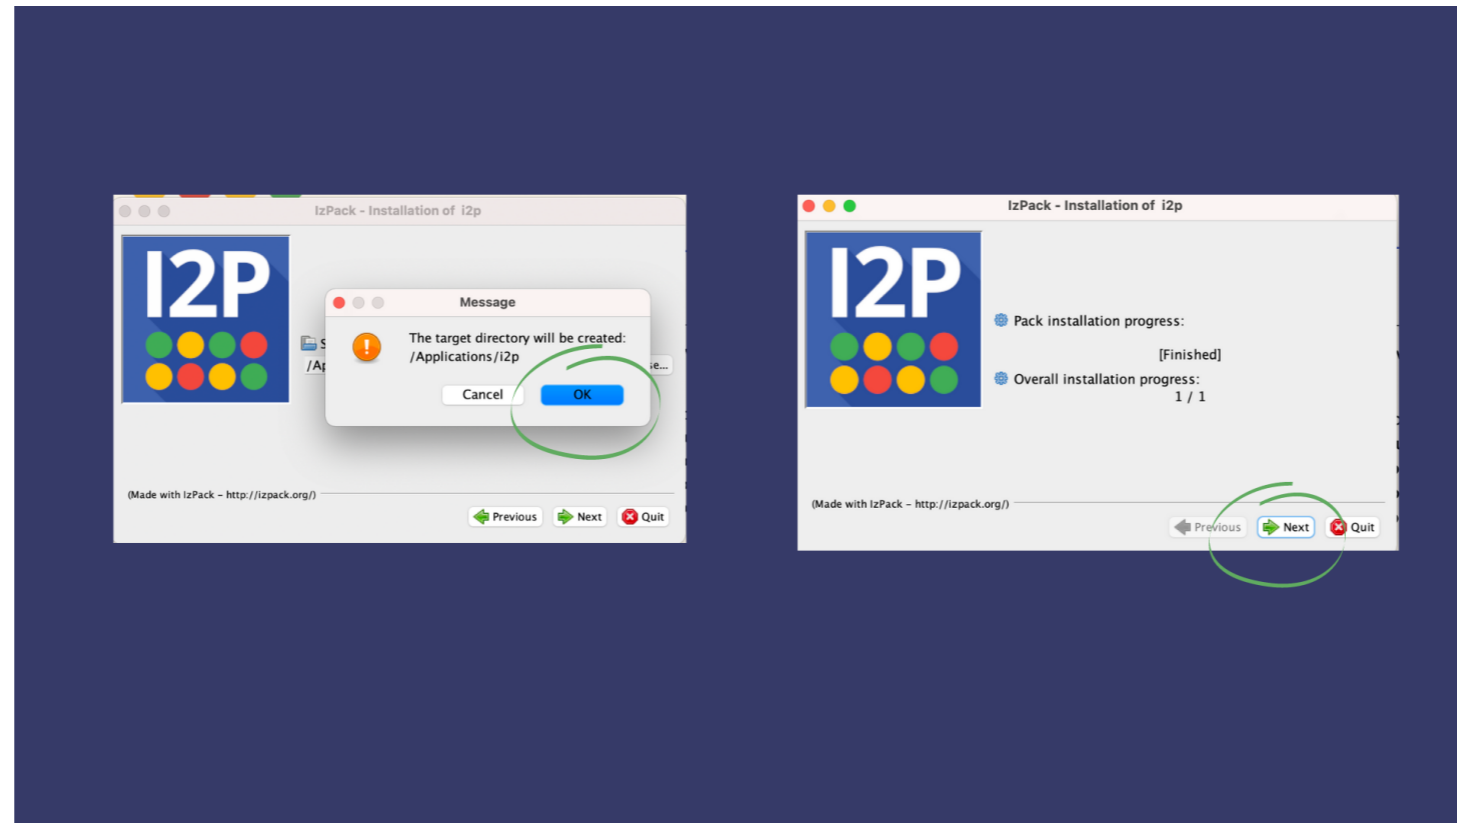

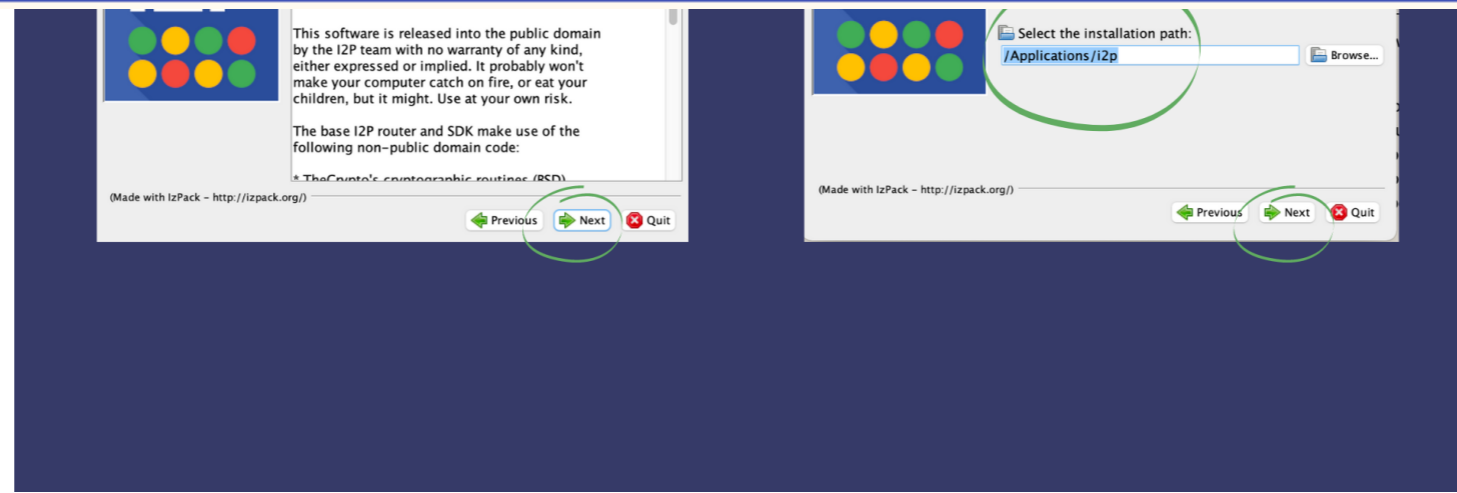

- 4 Follow the steps for installation.

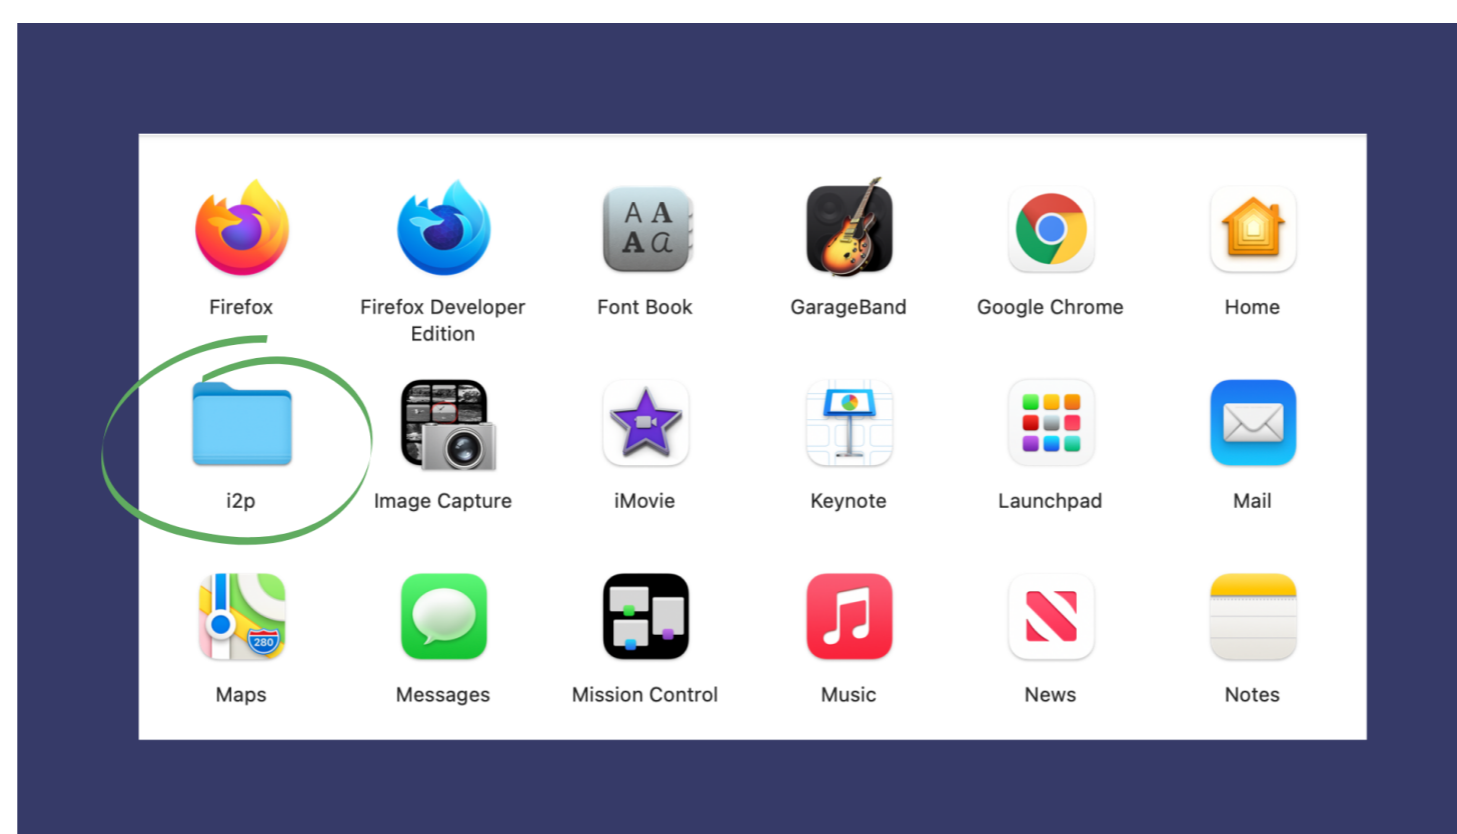

## Installation

I2P Installation  
Launching I2P  
Wizard Walk-through

## Launching I2P

- 1 Go to Finder, and open your Applications to locate the I2P folder.

- 2 Locate Start I2P Router.

- 2 Drag the icon into your dock.

## Installation

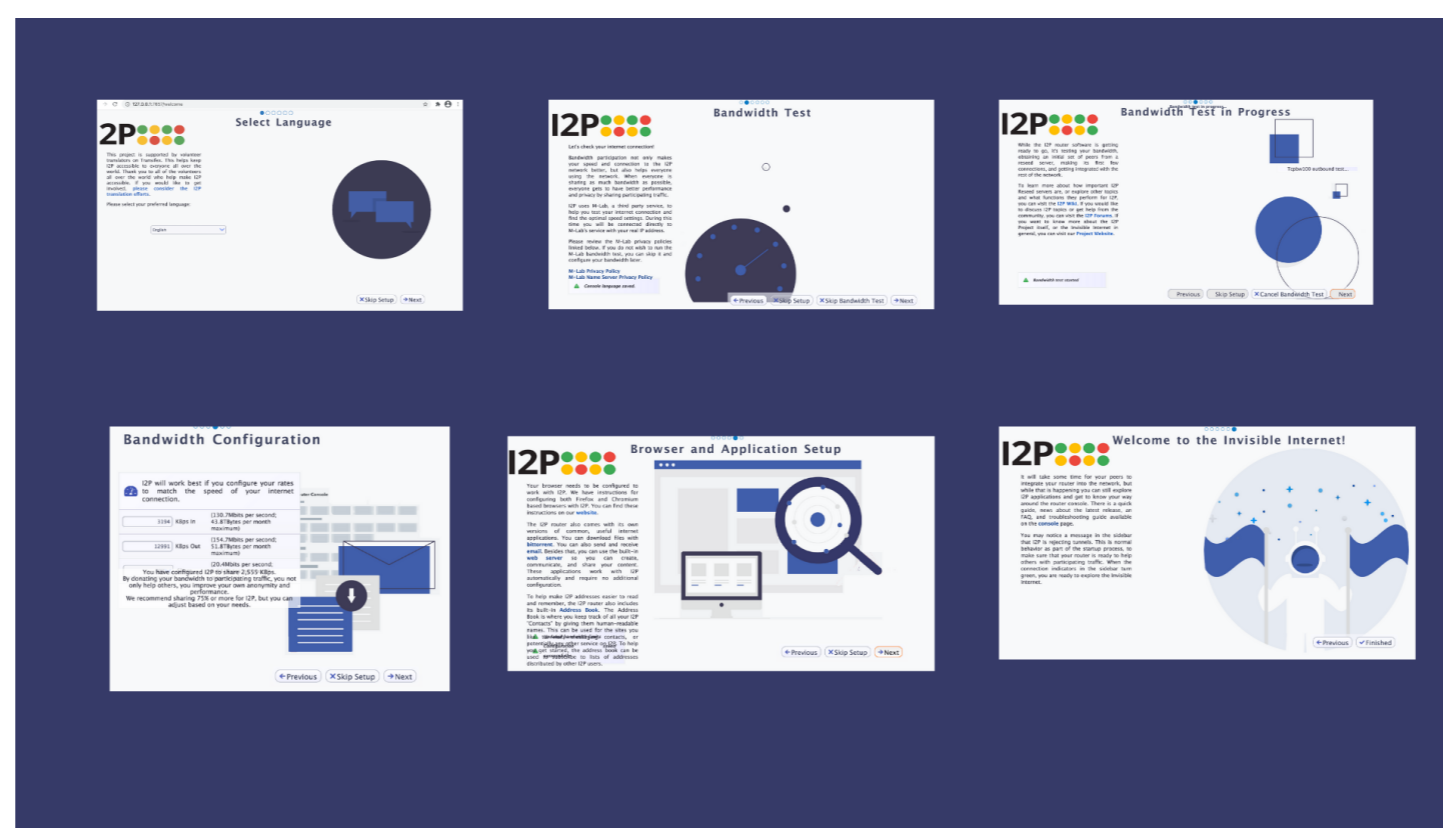

I2P Installation  
Launching I2P  
Wizard Walk-through

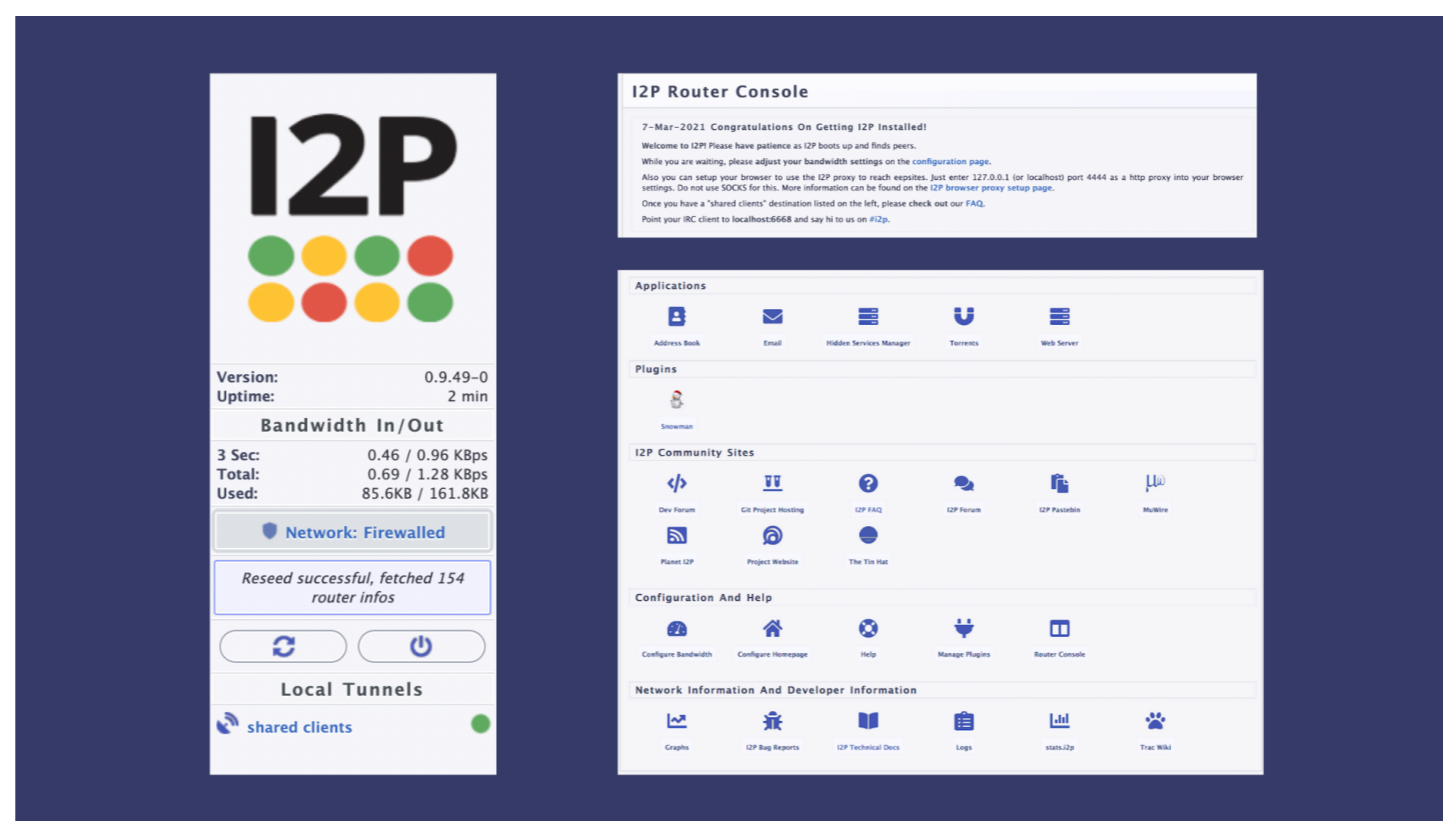

## Wizard Walk-through

- 1 The wizard was created for a few reasons. One, to choose your router console language, the next to test and set your bandwidth for network participation, and finally, to allow your I2P network connection to get started so that you have some peers ready for you when it is done. Follow the prompts!

For the bandwidth settings, the software has good default sharing percentages in place, so no need to worry about picking the right amount. You can also adjust this later.

- 2 The router console will look like this.

- 3 You've completed the installation process! You must configure your browser in order to use I2P. Choose your browser below for instructions.

- [Firefox](#)
- [Chrome](#)
- [Android](#)
- [Internet Explorer 8](#)

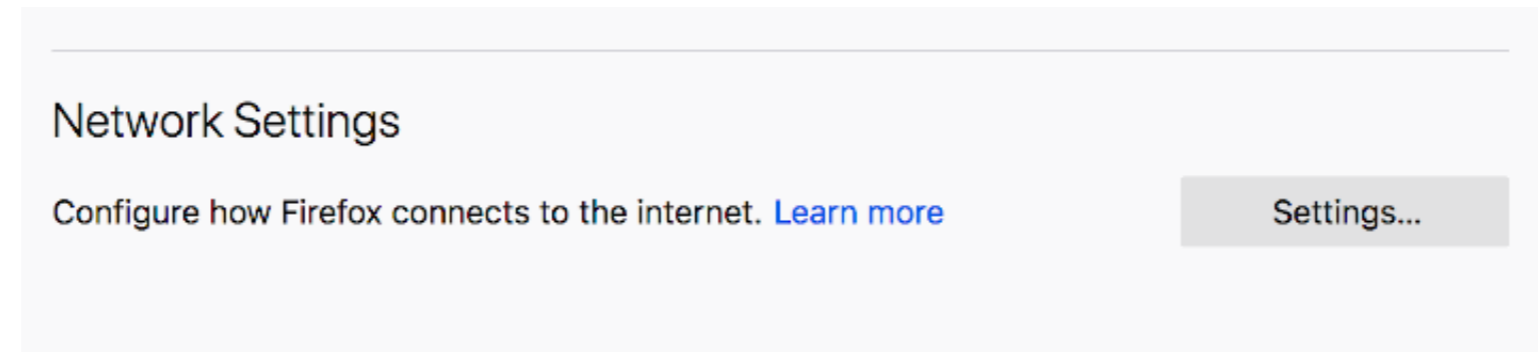

## Configuration

- Firefox
- Chrome
- Android
- Internet Explorer

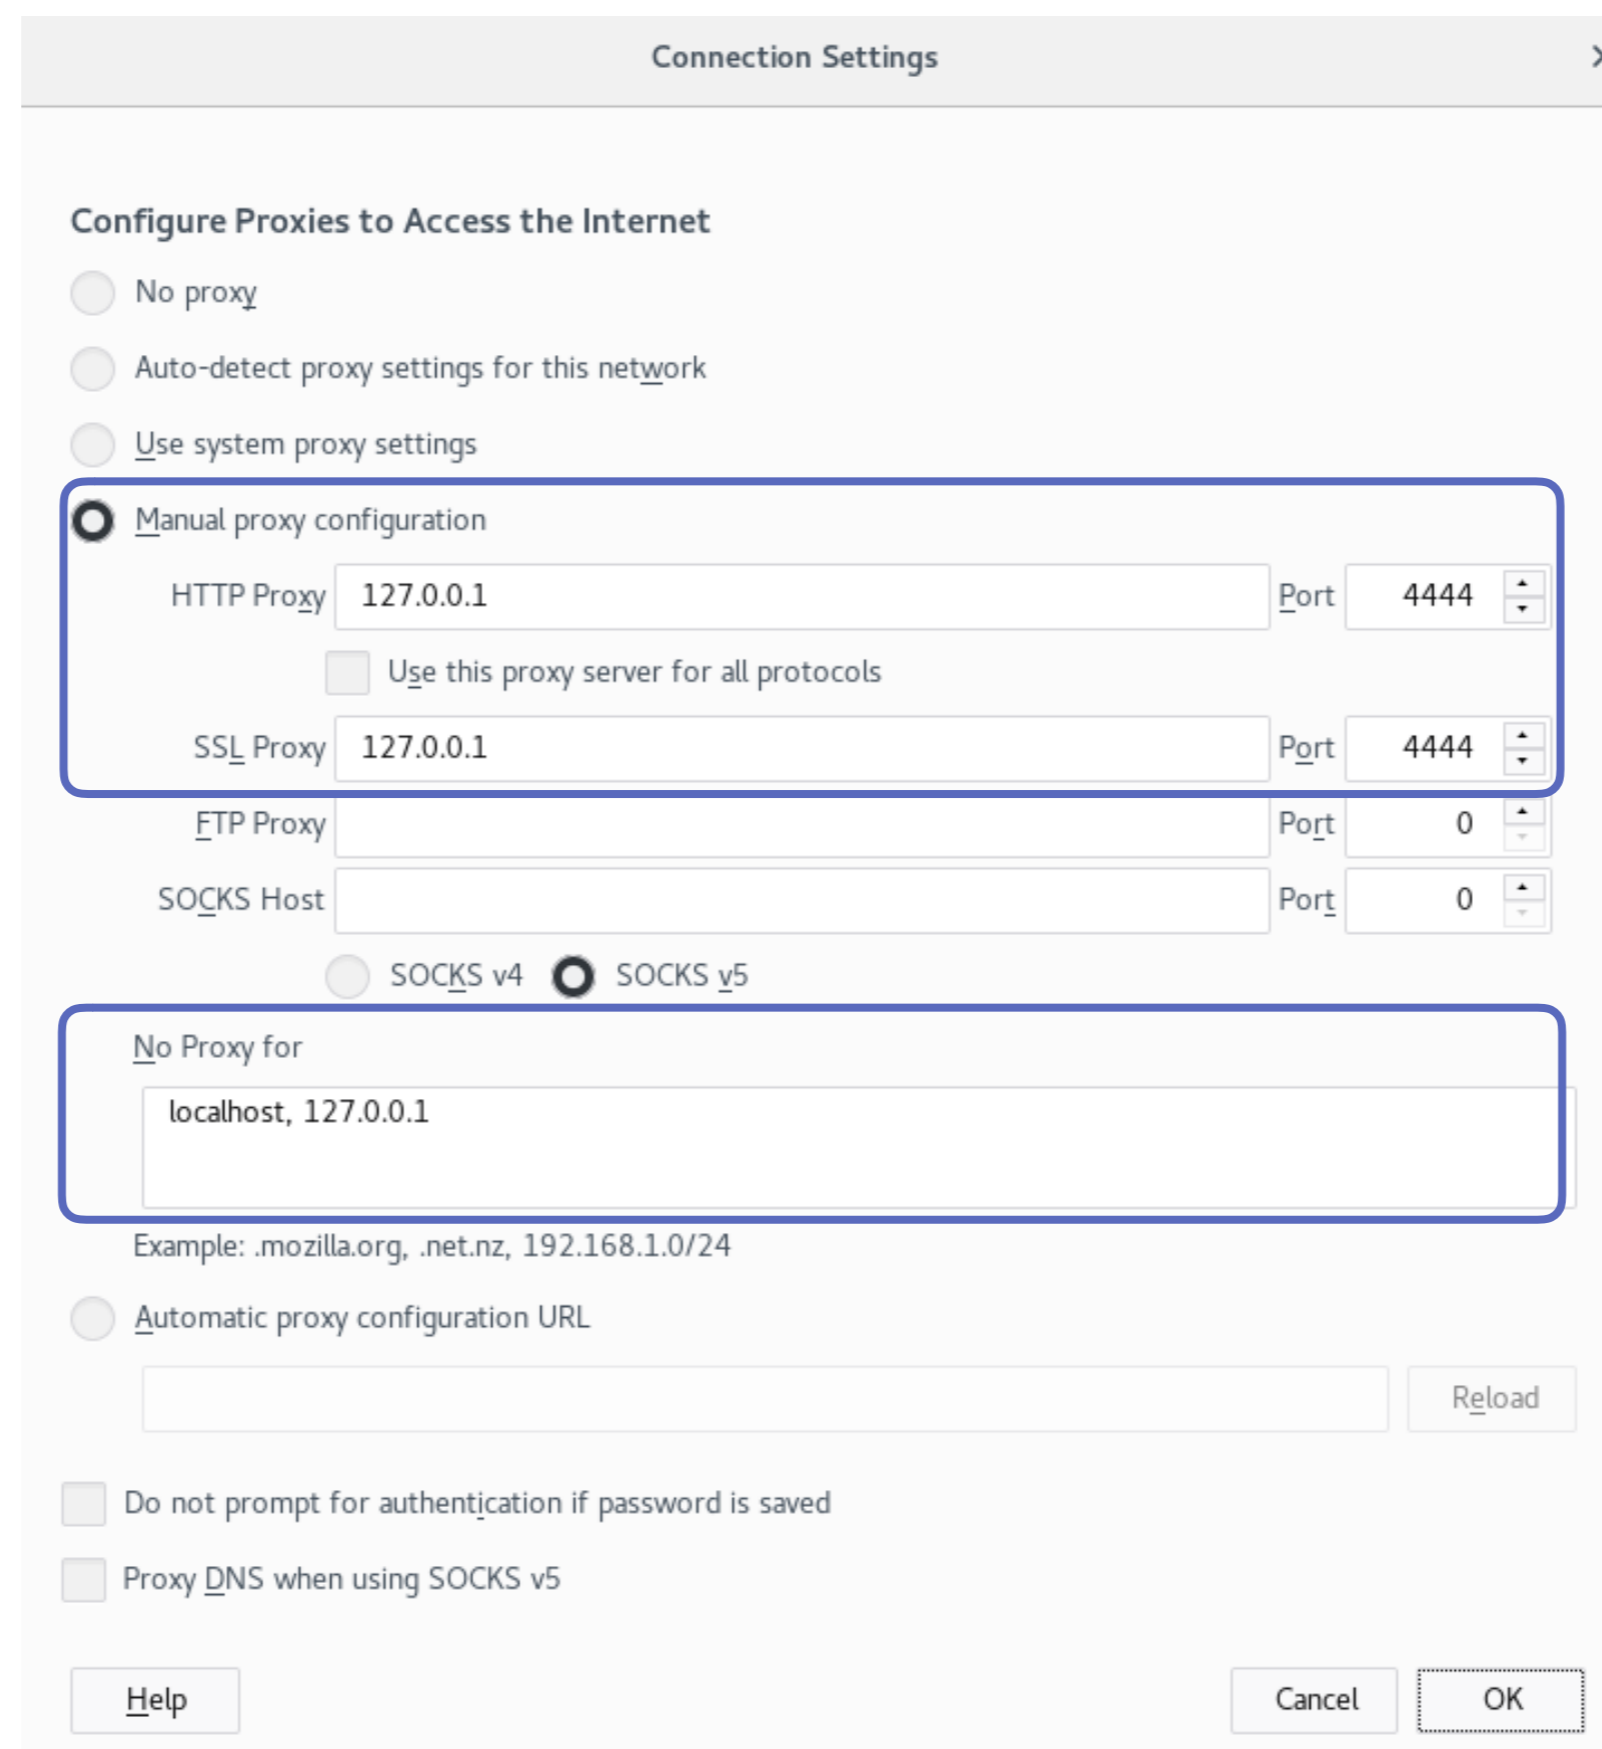

## Configuring Your I2P Network Connections

### Browser Configuration for Firefox 57 and above

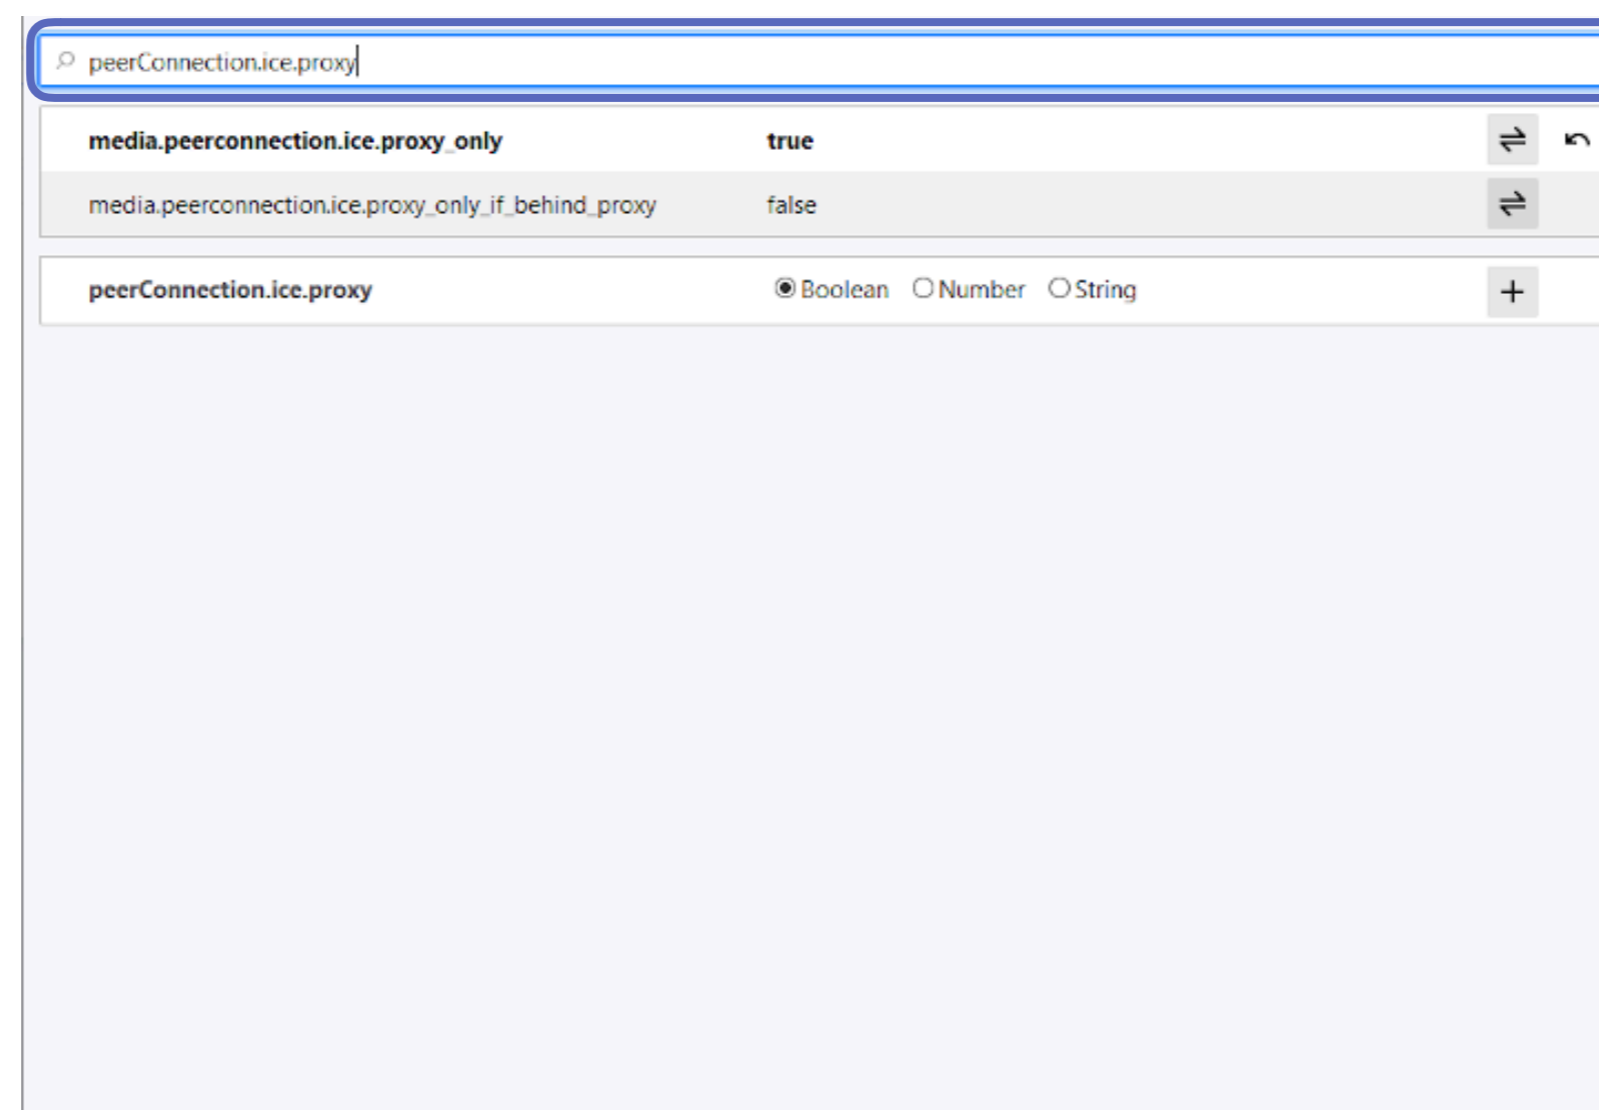

- 1 From the Menu button in the top right, select *Preferences*. Scroll down until you see the *Network Proxy* section, as shown in the screenshot below. Click on *Settings*

- 2 In the *Connection Settings* pop-up, select *Manual proxy configuration*. Set both the HTTP and SSL Proxy to address 127.0.0.1 with port 4444 as shown in the following screenshot.

- 3 Finally, go to the address *about:config* and find the property *media.peerConnection.ice.proxy\_only*. Ensure that this setting is True.

- 4 You've completed the configuration and all required steps for I2P Installation!
