

Basic Steps

System Requirements

For Windows, Mac, and Linux:
Java is required to run I2P. Download it [here](#).

For Android:
Android comes with a Java virtual machine as part of the platform, which I2P for Android uses. Therefore it is not necessary to install Java to use I2P for Android.

Debian and Ubuntu:
On Debian and Ubuntu when using a .deb package to install, the system will automatically install and configure a Java environment for you.

Z

1. Download the Software

Download will take you to a download page based on your operating system. Keep in mind that for Mac, Windows, and Linux you will need to also have Java downloaded and installed.

Z

2. Follow the Installation Instructions

Installation will consist of instructions on how to install the software once you've got it downloaded. You will follow each step and it will take you through a wizard walk through. Finally, you will open and launch I2P for the first time.

Z

3. Configure your Browser

Configuration requires that you configure your browser. This is necessary because of these reasons here blah blah blah. We recommend Firefox so that you can bypass this with the privacy add-on.

Installation Requirements

Once you've got I2P downloaded, getting I2P installed and running will consist of up to three steps:

1 Download Java

I2P needs Java to run for Windows, Mac, and Linux.

Go to [java.com](#) to download.

2 Installation Guide

Step-by-step installation guide include setting up Java, installing I2P, and using the I2P set-up wizard.

Follow the [guide](#).

3 Browser Configuration

Configure your browser settings to be compatible with the I2P network.

[Firefox](#)
[Chrome](#)
[Internet Explorer](#)

Terminal Instructions

The most reliable way to launch the installer is from a terminal like this: `java -jar i2pinstall_1.5.0.jar`. This will launch the GUI installer. Depending on how your computer is set up, you may be able to start the installer by double-clicking the "i2pinstall_1.5.0.jar" file or right-clicking the file and selecting "Open with Java". Unfortunately, this behaviour is difficult to predict.

Command Line (Headless) Install

I2P can also be installed in a terminal environment, which may be especially useful for servers, containers, or certain virtual machines. If you wish to use the installer without a GUI, you can use the command `java -jar i2pinstall_1.5.0.jar -console` to follow the install procedure in your terminal.

DMG Bundle (BETA)

If you do not want to use the installer or do not have a Java Runtime Environment available on your Windows PC, you can try our latest DMG bundle.

Ubuntu

I2P is available in the official repositories for Ubuntu Bionic and later, and Debian Buster and Sid. However, Debian Buster and Ubuntu Bionic (LTS) distributions will have older I2P versions. If you are not running Debian Sid or the latest Ubuntu release, use our [Debian repo](#) or [Launchpad PPA](#) to ensure you're running the latest I2P version.

On Debian and Ubuntu when using a .deb package to install, the system will automatically install and configure a Java environment for you.

Installation Requirements

Once you've got I2P downloaded, getting I2P installed and running will consist of up to two steps:

1 Installation Guide

Instructions for [Ubuntu](#) and derivatives like Linux Mint & Trisquel

2 Browser Configuration

Configure your browser settings to be compatible with the I2P network.

[Firefox](#)
[Chrome](#)
[Internet Explorer](#)

Instructions for Ubuntu and derivatives like Linux Mint & Trisquel

Adding the PPA via the command line and installing I2P

1. Open a terminal and enter:
2. `sudo apt-add-repository ppa:i2p-maintainers/i2p`
3. This command will add the PPA to `/etc/apt/sources.list.d` and fetch the gpg key that the repository has been signed with. The GPG key ensures that the packages have not been tampered with since being built.
4. Notify your package manager of the new PPA by entering:
5. `sudo apt-get update`
6. This command will retrieve the latest list of software from each repository that is enabled on your system, including the I2P PPA that was added with the earlier command.
7. You are now ready to install I2P!
8. `sudo apt-get install i2p`

Adding the PPA Using Synaptic

1. Open Synaptic (System -> Administration -> Synaptic Package Manager).
2. Once Synaptic opens, select *Repositories* from the *Settings* menu.
3. Click the *Other Sources* tab and click *Add*. Paste `ppa:i2p-maintainers/i2p` into the APT-line field and click *Add Source*. Click the *Close* button then *Reload*.
4. In the Quick Filter box, type in `i2p` and press enter. When `i2p` is returned in the results list, right click `i2p` and select *Mark for Installation*. After doing so you may see a *Mark additional required changes?* popup. If so, click *Mark* then *Apply*.

After the installation process completes you can move on to the next part of starting I2P and configuring it for your system.

Debian

I2P is available in the official repositories for Ubuntu Bionic and later, and Debian Buster and Sid. However, Debian Buster and Ubuntu Bionic (LTS) distributions will have older I2P versions. If you are not running Debian Sid or the latest Ubuntu release, use our [Debian repo](#) or [Launchpad PPA](#) to ensure you're running the latest I2P version.

On Debian and Ubuntu when using a .deb package to install, the system will automatically install and configure a Java environment for you.

Installation Requirements

Once you've got I2P downloaded, getting I2P installed and running will consist of up to two steps:

1 Installation Guide

Follow the step-by-step installation Instructions for [Debian](#).

2 Browser Configuration

Configure your browser settings to be compatible with the I2P network.

[Firefox](#)
[Chrome](#)
[Internet Explorer](#)

Instructions for Debian

Adding the PPA via the command line and installing I2P

1. Open a terminal and enter:
2. `sudo apt-add-repository ppa:i2p-maintainers/i2p`
3. This command will add the PPA to /etc/apt/sources.list.d and fetch the gpg key that the repository has been signed with. The GPG key ensures that the packages have not been tampered with since being built.
4. Notify your package manager of the new PPA by entering:
5. `sudo apt-get update`
6. This command will retrieve the latest list of software from each repository that is enabled on your system, including the I2P PPA that was added with the earlier command.
7. You are now ready to install I2P!
8. `sudo apt-get install i2p`

Adding the PPA Using Synaptic

1. Open Synaptic (System -> Administration -> Synaptic Package Manager).
 2. Once Synaptic opens, select *Repositories* from the *Settings* menu.
- Currently supported architectures: amd64, i386, armhf, arm64, powerpc, ppc64el, s390x*

Note: The steps below should be performed with root access (i.e., switching user to root with su or by prefixing each command with sudo).

1. Ensure that apt-transport-https and curl are installed.
2. `sudo apt-get update`
3. `sudo apt-get install apt-transport-https curl`
- 4.

5. Check which version of Debian you are using on this page at the [Debian wiki](#) and verify with /etc/debian_version on your system. Then, add lines like the following to /etc/apt/sources.list.d/i2p.list.

7. For Buster (stable):
8. `deb https://deb.i2p2.de/ buster main`
9. `deb-src https://deb.i2p2.de/ buster main`
- 10.

11. For Stretch (oldstable):
12. `deb https://deb.i2p2.de/ stretch main`
13. `deb-src https://deb.i2p2.de/ stretch main`
- 14.

15. For Jessie (oldoldstable):
16. `deb https://deb.i2p2.de/ jessie main`
17. `deb-src https://deb.i2p2.de/ jessie main`
- 18.

19. For Wheezy (obsolete):
20. `deb https://deb.i2p2.de/ wheezy main`
21. `deb-src https://deb.i2p2.de/ wheezy main`
- 22.

23. Note: If you are running Debian Sid (testing), then you can install I2P directly from Debian's main repository: `sudo apt-get install i2p`
- 24.

25. Download [the key used to sign the repository](#):
26. `curl -o i2p-debian-repo.key.asc https://geti2p.net/_static/i2p-debian-repo.key.asc`

29. Check the fingerprint and owner of the key without importing anything:
30. `gpg -n --import --import-options import-show i2p-debian-repo.key.asc`
- 32.
33. Add the key to APT's keyring:
